**FOR IMMEDIATE RELEASE**

## **MTSS-mba Membership Benefits Administration Software for Private and Taft-Hartley Employee Benefit Funds Offers New Arbitration Document Support Module**

**Jun 10, 2016 – Gaithersburg, MD** – Talbot Business Solutions, LLC, a premier software solutions provider, announced today the release of the Arbitration Document Support Module (ADS) for its cloud based Employee Benefits Administration software product, MTSS-mba.

The new ADS module offers those charged with managing arbitration and unfair labor practice cases, a central repository for the document and status history associated with the life cycle of those cases. Case records are each created by entering their key data elements. They can then be retrieved by any one, or combination of those elements. Case related documents are scanned in and linked to their cases. Each document may include hundreds of pages or just one, depending on how the user wishes to group them. Security is implemented so that users may have read only or read-write access to information.

Using the MTSS-mba ADS module, case documents, either open or closed, can be retrieved and referenced for language and settlement terms that may bear on current cases. Searches can be performed on date filed, local union, legal representative, open status and many other criteria. Reports can be generated according to case status for distribution among responsible parties.

The new ADS module, which can be integrated into an existing MTSS-mba installation, or stand alone, is now available in the general release of MTSS-mba. TPA versions will be available soon.

MTSS-mba is a mature, cloud based, feature-rich and powerful enterprise solution that efficiently manages membership and eligibility data for various types of benefit programs including Health and Welfare, Pension, Legal Services and others. Difficult research tasks such as data verification, are greatly streamlined by the integrated document imaging system which provides instant visual access to scanned source documents.

MTSS-mba has a customizable, modular design that affords seamless integration to accommodate any work-flow environment -- from the simplest single fund entity to the most complicated multi-fund, multi-entity organization having hundreds of thousands of benefit participants.

MTSS-mba enables benefit administrators to easily manage their data - AND - conserve resources by reducing expenses and increasing revenue collections.
